DonorsChoose

DonorsChoose.org receives hundreds of thousands of project proposals each year for classroom projects in need of funding. Right now, a large number of volunteers is needed to manually screen each submission before it's approved to be posted on the DonorsChoose.org website.

Next year, DonorsChoose.org expects to receive close to 500,000 project proposals. As a result, there are three main problems they need to solve:

- How to scale current manual processes and resources to screen 500,000 projects so that they can be posted as quickly and as efficiently as possible
- How to increase the consistency of project vetting across different volunteers to improve the experience for teachers
- How to focus volunteer time on the applications that need the most assistance

The goal of the competition is to predict whether or not a DonorsChoose.org project proposal submitted by a teacher will be approved, using the text of project descriptions as well as additional metadata about the project, teacher, and school. DonorsChoose.org can then use this information to identify projects most likely to need further review before approval.

About the DonorsChoose Data Set

The `train.csv` data set provided by DonorsChoose contains the following features:

Feature	Description
`project_id`	A unique identifier for the proposed project. **Example:** `p036502`
`project_title`	Title of the project. **Examples:** • `Art Will Make You Happy!` • `First Grade Fun`
`project_grade_category`	Grade level of students for which the project is targeted. One of the following enumerated values: • `Grades PreK-2` • `Grades 3-5` • `Grades 6-8` • `Grades 9-12`
	One or more (comma-separated) subject categories for the project from the following enumerated list of values: • `Applied Learning` • `Care & Hunger`

Feature	Description
project_subject_categories	• Health & Sports • History & Civics • Literacy & Language • Math & Science • Music & The Arts • Special Needs • Warmth **Examples:** • Music & The Arts • Literacy & Language, Math & Science
school_state	State where school is located (Two-letter U.S. postal code). **Example:** WY
project_subject_subcategories	One or more (comma-separated) subject subcategories for the project. **Examples:** • Literacy • Literature & Writing, Social Sciences
project_resource_summary	An explanation of the resources needed for the project. **Example:** • My students need hands on literacy materials to manage sensory needs!
project_essay_1	First application essay*
project_essay_2	Second application essay*
project_essay_3	Third application essay*
project_essay_4	Fourth application essay*
project_submitted_datetime	Datetime when project application was submitted. **Example:** 2016-04-28 12:43:56.245
teacher_id	A unique identifier for the teacher of the proposed project. **Example:** bdf8baa8fedef6bfeec7ae4ff1c15c56
teacher_prefix	Teacher's title. One of the following enumerated values: • nan • Dr. • Mr. • Mrs. • Ms. • Teacher.
teacher_number_of_previously_posted_projects	Number of project applications previously submitted by the same teacher. **Example:** 2

* See the section **Notes on the Essay Data** for more details about these features.

Additionally, the resources.csv data set provides more data about the resources required for each project. Each line in this file represents a resource required by a project:

Feature	Description
id	A project_id value from the train.csv file. **Example:** p036502
description	Desciption of the resource. **Example:** Tenor Saxophone Reeds, Box of 25
quantity	Quantity of the resource required. **Example:** 3
price	Price of the resource required. **Example:** 9.95

Note: Many projects require multiple resources. The id value corresponds to a project_id in train.csv, so you use it as a key to retrieve all resources needed for a project:

retrieve all resources needed for a project.

The data set contains the following label (the value you will attempt to predict):

Label	Description
`project_is_approved`	A binary flag indicating whether DonorsChoose approved the project. A value of `0` indicates the project was not approved, and a value of `1` indicates the project was approved.

Notes on the Essay Data

Prior to May 17, 2016, the prompts for the essays were as follows:

- __project_essay_1:__ "Introduce us to your classroom"
- __project_essay_2:__ "Tell us more about your students"
- __project_essay_3:__ "Describe how your students will use the materials you're requesting"
- __project_essay_3:__ "Close by sharing why your project will make a difference"

Starting on May 17, 2016, the number of essays was reduced from 4 to 2, and the prompts for the first 2 essays were changed to the following:

- __project_essay_1:__ "Describe your students: What makes your students special? Specific details about their background, your neighborhood, and your school are all helpful."
- __project_essay_2:__ "About your project: How will these materials make a difference in your students' learning and improve their school lives?"

For all projects with project_submitted_datetime of 2016-05-17 and later, the values of project_essay_3 and project_essay_4 will be NaN.

Starting the new year off right sets the tone for months to come. My class will be thrilled to rec
eive basic supplies to help them be successful.\r\n\r\nMy students are curious, inquisitive, and e
nthusiastic learners who enjoy school.\r\n\r\nOur school is a public community school in New York
City that receives Title I funding, which means that many students are eligible for free or reduce
d price lunch. Most of my students are English language learners. Our self-contained class is comp
rised of students with disabilities in second and third grade.We need printer ink so we can showca
se our wonderful work, and other supplies such as pocket charts for subject-specific word walls.\r
\n\r\nThe poetry book will align with our specialized phonics and reading program, and the Recipro
cal Teaching Strategies book will help us get where we need to be.\r\n\r\nChart paper is a staple
for any literacy or math lesson, and folders will help keep us organized. Ziplock pouches will att
ach to students' homework folders, making it simple and easy to transport school books home and ba
ck. \r\n\r\nPlease help us meet our needs with your support and generous donations. Thank
you!nannan
```

Use Decontraction function to decontract project essay

    phrase = re.sub(r"won't", "will not", phrase)
    phrase = re.sub(r"can\'t", "can not", phrase)

    # general
    phrase = re.sub(r"n\'t", " not", phrase)
    phrase = re.sub(r"\'re", " are", phrase)
    phrase = re.sub(r"\'s", " is", phrase)
    phrase = re.sub(r"\'d", " would", phrase)
    phrase = re.sub(r"\'ll", " will", phrase)
    phrase = re.sub(r"\'t", " not", phrase)
    phrase = re.sub(r"\'ve", " have", phrase)
    phrase = re.sub(r"\'m", " am", phrase)
    return phrase
```

In [14]:

```
sent = decontracted(project_data['essay'].values[1])
print(sent)
print("="*50)
```

```
Have you ever worked so hard on a project only to get it back from a teacher with a dismal grade?
Or have a loved one that tries so very hard in school but just does not seem to grasp the
concepts? That is how my students with special needs feel everyday! I create a classroom where eve
ryone succeeds.\r\nMy students all have mild to moderate disabilities.  The disabilities range fro
m various levels of autism, moderate learning disabilities, challenges with attention, to being
classified as intellectually impaired.  \r\nThese students are just wonderful people but face dail
y challenges that you and I could never fathom. Most of my students come from low socioeconomic ho
mes. Suffering from disabilities makes it difficult for them to read, comprehend, write, and solve
math equations using typical learning styles. Technology is a way to bridge that learning gap thes
e students struggle with each and every day.\r\nThese Chromebooks will be used in my classroom to
help students complete their Common Core assignments in all subject areas. Students will be able t
o use this technology to help with the 21st century skills needed to be successful with the new Co
mmon Core State Standards and daily life.\r\nThis technology will make a huge impact on their
lives.  We currently have a teacher computer, document camera, projector, printer, and one
chromebook per two students. The school itself has a few computer labs that it shares with the ent
ire student body. These Chromebooks will be a huge benefit to my students' lives.nannan

Preprocessing of `project_title`

In [22]:

```
# similarly you can preprocess the titles also
preprocessed_project_title=Text_cleaner(project_data['project_title'])
```

```
100%|██████████████████████████████████████████████████████████████████████████| 50000/50000
[00:02<00:00, 21911.39it/s]
```

In [23]:

```
preprocessed_project_title[1]
```

Out[23]:

```
'keep spirit alive'
```

Drop column project_title and use Cleaned_Title

In [24]:

```
project_data['Cleaned_title']= preprocessed_project_title
project_data.drop(['project_title'], axis=1, inplace=True)
```

Add up the price based on project id

In [25]:

```
price_data = resource_data.groupby('id').agg({'price':'sum', 'quantity':'sum'}).reset_index()
project_data = pd.merge(project_data, price_data, on='id', how='left')
```

In [26]:

```
project_data.columns
```

Out[26]:

```
Index(['Unnamed: 0', 'id', 'teacher_id', 'teacher_prefix', 'school_state',
       'project_submitted_datetime', 'project_grade_category',
       'project_resource_summary',
       'teacher_number_of_previously_posted_projects', 'project_is_approved',
       'clean_categories', 'clean_subcategories', 'essay', 'Cleaned_title',
       'price', 'quantity'],
      dtype='object')
```

In [27]:

```
project_data.drop(['project_resource_summary'], axis=1, inplace=True)
project_data.drop(['Unnamed: 0'], axis=1, inplace=True)
project_data.drop(['id'], axis=1, inplace=True)
project_data.drop(['teacher_id'], axis=1, inplace=True)
```

Adding the word count of essay and title as new columns

In [28]:

```
project_data['essay_count']=project_data['essay'].str.len()
project_data['title_count']=project_data['Cleaned_title'].str.len()
```

we are going to consider

- school_state : categorical data
- clean_categories : categorical data
- clean_subcategories : categorical data
- project_grade_category : categorical data
- teacher_prefix : categorical data

- project_title : text data
- text : text data
- project_resource_summary: text data (optinal)

- quantity : numerical (optinal)
- teacher_number_of_previously_posted_projects : numerical
- price : numerical

-Length of words in essay
-Length of words in title

Separate out the Dependant and independant variables

In [29]:

```
#https://stackoverflow.com/questions/29763620/how-to-select-all-columns-except-one-column-in-pandas
X=project_data.loc[:, project_data.columns != 'project_is_approved']
y=project_data['project_is_approved']
X.shape
```

Out[29]:

```
(50000, 13)
```

Splitting data into Test,Train,CV

In [30]:

```
